

KÜTTNER

COKING PLANTS

ENGINEERING
AND CONTRACTING

KÜTTNER was founded in 1949 by Dr. Küttner as an engineering company and has ever since developed into a group of companies mainly working in plant engineering and construction.

Turnkey installations for process, melting and material handling in the iron and steel as well as in the foundry industry are built.

Services include development of new technologies, engineering and planning, supply, installation, and start up of complete plants with controls and data processing systems.

The KÜTTNER Group employs more than 300 people worldwide. The majority of the owners work within the company.

Coking Plant

KÜTTNER supplies plants for conveying and processing of raw coal as well as for charging of the coal tower.

At the wharf or behind the coke dry cooling the raw coke is taken and screened into the fractions most beneficial for the blast furnace operation. KÜTTNER provides the complete screening plant with the conveying system, stabilization via controlled dropping, screening system, sampling and monitoring equipment and the dedusting of the individual components.

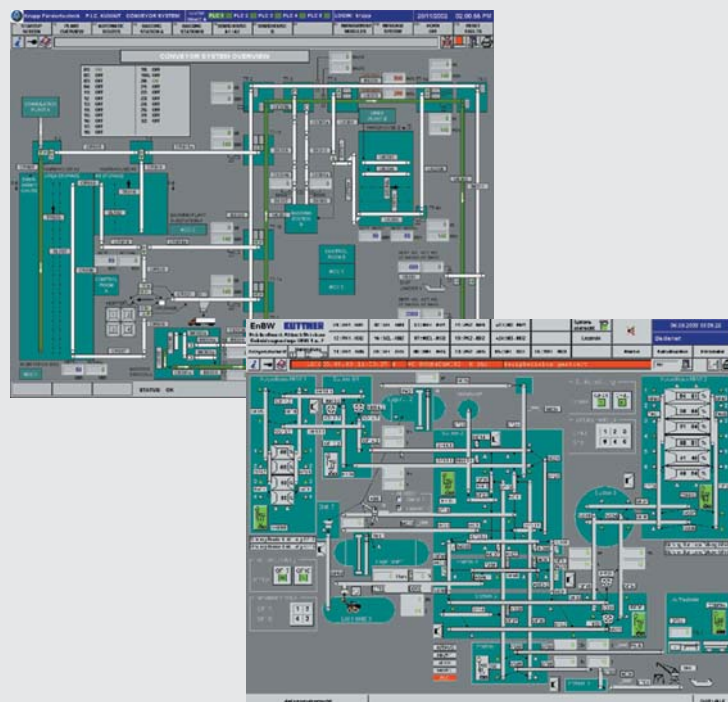

AUTOMATION TECHNOLOGY

Automation technology

KÜTTNER has been active in the field of process automation for decades. This know-how is used for the design of innovative process automation and control systems as well as for updating of existing systems.

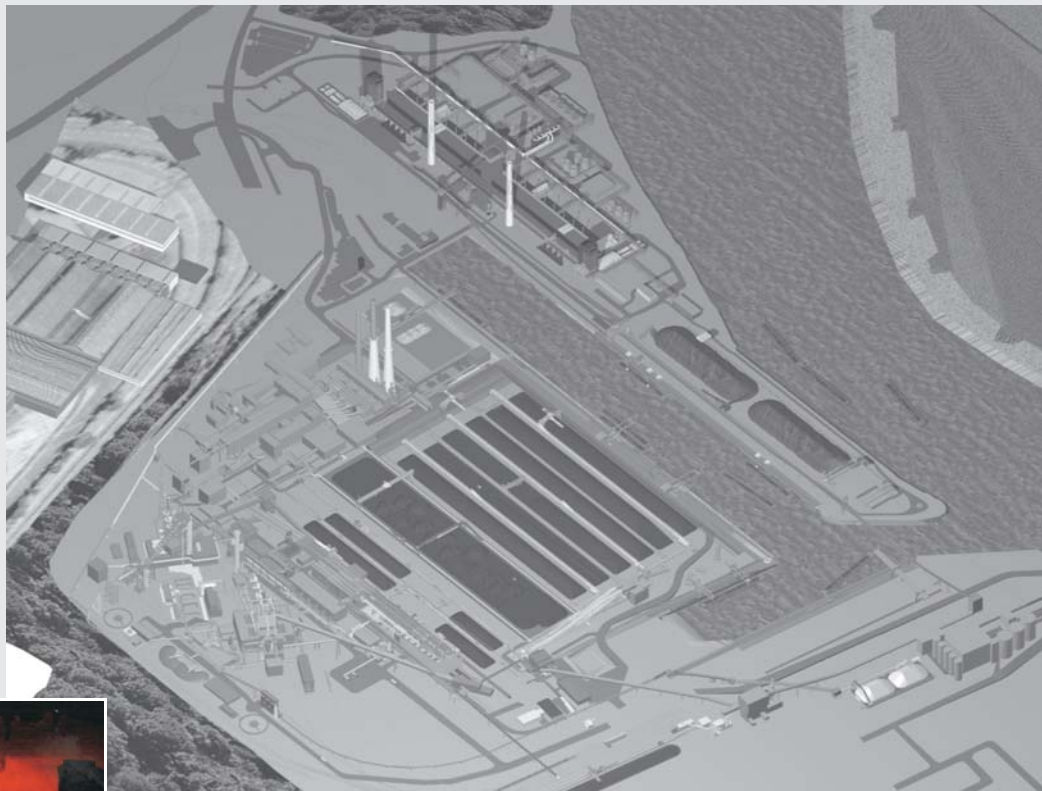

Selecting the system technology highest possible flexibility can be offered. The customer can choose from all available automation formats.

With the industrial Information Management System (iIM®) the gap between production and office world was closed with the goal of refining relevant operational data.

KÜTTNER

Numerous activities are illustrated individually with detailed brochures. We are happy to send these out on your request.
